

SAVE MONEY WHILE YOU HELP SAVE THE PLANET

Most people think of insulation like a blanket that keeps you warm in the winter. But did you know that insulation also keeps cold air from leaking out during the summer? Without enough attic insulation, your HVAC unit has to work longer and harder to keep your home cool, and that leads to high utility bills and lower energy efficiency.

THE STANDARDS ARE CLEAR

According to the Department of Energy, over 80 million homes in the U.S. have insufficient levels of attic insulation. The recommended level is 18", how much does your home have? Unless it has been built to current Energy Star approved levels, chances are that your home is one of the 80 million.

Now for the good news: **adding insulation in your attic can drop your energy bills by a third!** And on top of that, your local utility providers want to help you with this energy efficiency problem by giving you a rebate on your energy bill for adding the right level of insulation to your attic.

ADDING ATTIC INSULATION

So your attic may be underinsulated, what do you do about it? Adding attic insulation can be a hot, tedious job to do yourself, and it is possible to install it incorrectly. That's why we offer insulation services to our customers.

Here's what we do:

1. We start with an assessment of your attic insulation levels. We also check for air duct leaks that may contribute to the problem.
2. If adding insulation is the right solution for you, we prep the attic with attic rulers, soffit covers to ensure proper air flow and firecovers for can lights.
3. Then we use a made in the U.S.A insulation blowing machine to blow loose-fill insulation into your attic until we reach the 18" mark.
4. Because all of our customers have different wants and needs, we offer formaldehyde-free fiber glass or cellulose insulation for your attic.
5. After we're done, we'll invite you up to see that the job has been done carefully and correctly.

83% OF HOMEOWNERS ARE GLAD THEY ADDED ATTIC INSULATION!

Our customers are not only pleased with the insulation service, 4 out of 5 satisfied homeowners also recommend the service to their friends and family.

Don't suffer through another hot summer full of high energy bills. You and your family deserve comfort and savings this year.

Call today and we'll send a highly trained technician to inspect your attic for free!
